By

I. ANDRÁSSY*

I. Renaming of a homonymous species of the genus *Dorylaimus*

In a recent paper (ANDRÁSSY, 1978) I described a new *Dorylaimus* species from the Himalayas, viz. *Dorylaimus conurus* ANDRÁSSY, 1978. When proposing the new name, I unfortunately failed to perceive that the specific name „conurus” had already been used by THORNE (1939) for another member of the genus *Dorylaimus*. As a consequence, my „*Dorylaimus conurus*” became a junior homonym of THORNE’s „conurus”.

To resolve this homonymy, the following new name is proposed herewith for the Himalayan species:

***Dorylaimus conicus* n. nom.** — Syn. *Dorylaimus conurus* ANDRÁSSY, 1978, nec THORNE, 1939.

II. Check list of free-living nematode genera and subgenera described after my book published in 1976

In the book on the systematization of the Nematoda (ANDRÁSSY, 1976), I compiled a check list of the genera and subgenera of free-living nematodes that have been described to that time. This enumeration contained 1410 generic taxa.

In the five years passed after finishing the manuscript, a great deal of further genera and subgenera have been established as new to science by different authors. To complete the list of 1976, I shall add here a list of the generic taxa described in the last years, as well as of those somes that had been omitted from the said book. The following list contains 136 genera and 13 subgenera, i. e. 149 generic names published by 84 authors. (The abbreviations of the orders are: AR = Areolaimida, CH = Chromadorida, DE = Desmoscolecida, DO = Dorylaimida, EN = Enoplida, MO = Monhysterida, RH = Rhabditida, TY = = Tylenchida.)

*Dr. István Andrássey, ELTE Állatrendszertani és Ökológiai Tanszék (Zoosystematical and Ecological Institute of the Eötvös Loránd University), 1088 Budapest, VIII. Puskin u. 3.
